Looking at Nonbinary Gender in the Greek and Roman World

Contextual

---

have the most memorable event. It takes a lot of time and effort to find the right speakers—speakers who have interesting topics to talk about, speakers who are articulate and can convey their thoughts and opinions while keeping the audience engaged, speakers who are experts in their area and willing to put in the time and effort to prepare and deliver the talk. Men and women can easily fill in these criteria. It is up to the organizers to start looking beyond the usual suspects and put in the extra effort to find the diverse speakers.

Mathematician Greg Martin has used statistical probability to prove that the odds of having zero women speakers at a math conference are next to none.

En Línea

In his words,

> If conference speakers were being chosen by a system that treated gender fairly (which is to say, gender was never a factor at all), then in any conference with over 10 speakers, say, it would be extremely rare to have no female speakers at all —less than 5 percent chance, depending on one's assumption about the percentage of women in mathematics as a whole.
